SHREEPAD SHARNARTHI

Freelance Full-Stack & AI Application Developer

Pune, India — Remote worldwide
sharnarthim@gmail.com — GitHub — LinkedIn

Profile

Computer Science engineer who builds clean, reliable Python/Django web applications, REST APIs and database-driven systems. I help businesses get online and run smoother through responsive websites, custom dashboards and practical AI features (LLM integrations, document assistants, RAG prototypes), delivered with clear communication and working software you can see early.

What I Can Build for You

- **Business websites & landing pages** — responsive, fast and easy to maintain; updates to existing sites.
- **Custom web applications** — dashboards, management systems and CRUD workflows with database integration.
- **Backend & APIs** — Django / Django REST Framework services, SQL design and backend improvements.
- **AI integration** — LLM-powered features, document assistants and RAG prototypes.
- **Data dashboards** — Python, SQL and Power BI reporting that turns raw data into decisions.

Selected Projects

HR Analytics & Employee Management System — *Django, DRF, Bootstrap 5, Chart.js, Pandas, SQLite* Link

- Employee administration app with authentication, role-based access and an analytics dashboard.
- CSV import/export for bulk data handling, plus REST APIs for integration.

Library Management System — *React, Vite, Django REST Framework, PostgreSQL, JWT* Link

- Full-stack app covering books, members and borrowing workflows with JWT authentication.
- Dashboard and reporting views for day-to-day library operations.

Egret – AI-Powered Precision Agriculture Platform — *Python, Flask, Gemini API, Pandas, NumPy* Link

- AI-assisted crop recommendations and agricultural insights using the Gemini API.

Customer Shopping Behavior Analytics Dashboard — *Python, SQL, Power BI, Pandas, NumPy* Link

- Analysis of purchasing behaviour, customer segmentation and shopping trends, presented in Power BI.

Technical Skills

Backend	Python, Django, Django REST Framework, REST APIs, Flask
Frontend	React, JavaScript, HTML, CSS, Bootstrap
Databases	PostgreSQL, MySQL, SQLite, SQL Server
Tools & Data	Git, GitLab, Docker, Pandas, NumPy, Power BI
AI	LLM integration (Gemini API), embeddings, RAG, agentic workflows

Experience

Python Django Developer Intern — *Markytics.AI*

- Backend development and maintenance with Python/Django, database operations and debugging in collaborative projects. (Details kept general for client confidentiality.)
- Designed a centralized, multi-tenant metrics and monitoring platform on VictoriaMetrics, Grafana and Alertmanager, deployed with Docker Compose behind an Nginx reverse proxy.
- Wrote the implementation plan and hardened it after a security and architecture review: tenant isolation, authenticated access, tiered data retention, per-tenant alert rules and backups.
- Planned a phased rollout to replace per-project Prometheus setups with a single central cluster, including an acceptance-test checklist.
- Built StatusViewer, an observability dashboard that syncs services from the metrics store into a Django REST + PostgreSQL backend, with Redis/SSE live updates and a React frontend.

Data Analytics & Python Developer Intern — *QSpiders CampusConnect*

Advanced Java Trainee — *Giri Tech Hub*

Education & Research

B.Tech, Computer Science Engineering — *Orchid College of Engineering, Solapur (DBATU)* 2026

- Co-author, *Explainable AI for dermatological diagnosis*, accepted at IEEE ICEFEET 2026, NIT Patna.

Open to remote freelance projects. Scope, timeline and pricing are agreed per project — let's talk.
